

Rationale Statement: Specialization Standard 3-1

Lance A. Webel, Cincinnati Hills Christian Academy

Outcome: Facilitates technology-enhanced experiences that address content standards and student technology standards.

Evidence: EDUC 6664 Week 2 Application

This Application was an obvious choice as evidence for Specialization Standard 3-1. In it, I describe how a lesson about URL's that I regularly use in my classroom can be fitted to the framework that is provided in EDUC 6664. This re-fitting of an already-existing lesson will allow me to address content standards and student technology standards more accurately and effectively.

Moreover, the changes that I outlined in this project will reinforce consistent learning by connecting pre-existing knowledge with future curriculum. Students can build upon previous lessons, generalize their learning to other interactions with the Internet, and become actively involved in a process of discovery and advocacy. If successful, this type of lesson will promote the natural integration and self-promotion of student technology standards, even before I have intentionally addressed them in my curriculum!
